

Robert (Bob) Wilson

Bob passed away on February 6, 2010 at the age of 58. He was highly regarded by his employer and co-workers at Sun Life Financial. Bob's many interests and extensive knowledge on almost any subject attracted many friends. In Bob's spare time he became quite an accomplished photographer and he was looking forward to developing it further in his retirement.

Bob was diagnosed with pancreatic cancer in October 2009 only when it had metastasized to his lungs. The cancer was detected through a biopsy of the fluid drained from his lungs. Bob's father also died from the same disease. We also believe his grandfather who had cancer throughout had the same disease.

There still is no test today for early detection of pancreatic cancer. I hope through funding pancreatic cancer research we will at least find a way to detect this disease in its early stages.

Eileen Wilson
