

Rehab El Sabini

I have posted my story in order to make patients aware of the inevitable consequences of the "GEMZAR" treatment and to encourage doctors and scientists look for better and safer ways of treatment. Oncologists and doctors refused to try other ways of treatment such as cyberknife, Tarceva, radiation. They all said it's a matter of 2-3 months survival period and to prepare myself to the upcoming tragedy. My wife's death was a true tragedy, she was very beautiful, polite, kind and a mother of my three young children (7, 10, 13 years) and her illness was a real surprise for us with no cancer history in her family. Unfortunately, I was helpless in trying to save her and never thought of losing her.

My wife was 39 yrs old in Sept. 08. She was full of life apart from some abdominal pain when pancreas cancer was diagnosed in Egypt. We went to France's "Eduard Herriot hospital - Lyon" in Jan 09 where they confirmed a 3 x 4 cm pancreas tumor as well as 7 : 8 metastasis on liver and prescribed weekly "GEMZAR" infusion. She got worse each infusion and died on Sept. 09. I'm sure that GEMZAR caused a blood septicemia as well as destroyed liver tissues. So, please stop GEMZAR treatment.

Trusting French medication, Egyptian oncologists would not change GEMZAR. But at the end I lost my wife. However, some Egyptian doctors advised to stop medication at all (hopeless case). Please do your best in finding better treatment for pancreas cancer.
